

# ImageShare v3 User Guide

## GUEST:

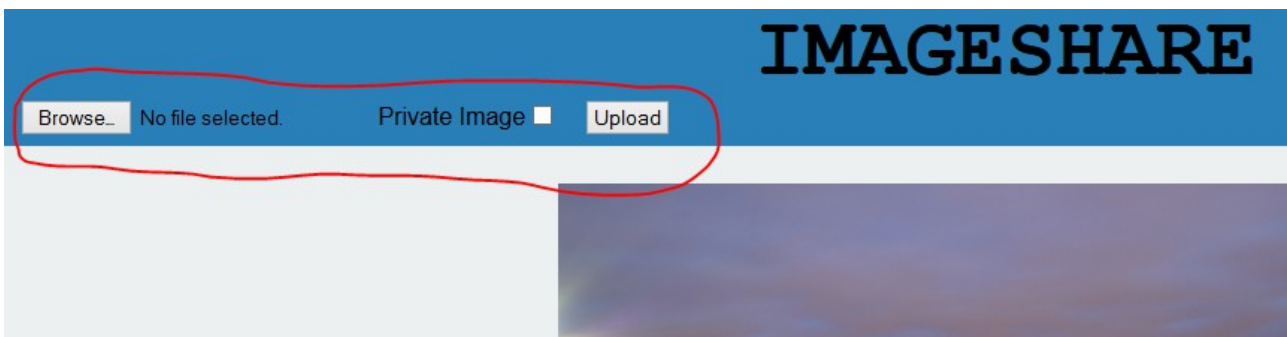

When the user has not logged in with their Google Account they will be a guest on the site. If a user is unsure if they are logged in or not, the picture below shows where to check their login (top right corner of the screen).

If the user has Guest status they will be able to view all public images. They will not be able to upload their own images or delete images. They must login to access these features. The login button can be found in the same place as the image above.

## USER:

If a user successfully logs in with their Google Account, they will see in the top right corner of the screen "*Logged in as* username@gmail.com". From here users can view all images, both private and public, as well as upload their own images that can be either public or private. The location of the upload interface can be seen in the image below.

Notice the checkbox called Private Image. Users can set their images to be private which means Guests will not be able to view them. By default, images are set to public. Users may also delete any images that they have uploaded, but not the images uploaded by other users.

Highlighted above is where to delete images.

### **ADMIN:**

When a user logs in to ImageShare with a Google Account that has been made a collaborator on Google App Engine, they will have Admin privileges. They will have all the same privileges of the regular User, such as the ability to view private images, and upload them. By default uploaded images are set to private. Admins are also able to delete any images uploaded by themselves and other users.
